Remote Desktop Manager

CROSS-PLATFORM iOS

Remote Connections & Passwords. Everywhere!

Remote Desktop Manager (RDM) is an elegantly efficient solution for launching connections, or conveniently viewing entries that have been centralized in your data source (database). It also saves all of your remote connections, passwords and documents in a single, secure platform. With RDM, you can quickly and easily add, edit, delete, share, organize, and find your remote connections and passwords via an intuitive interface.

Remote Desktop Manager is currently available in two editions: **Free** and **Enterprise**. The Free Edition is designed for single users, while the Enterprise edition is designed for teams.

Both Free and Enterprise editions are available on PC, Mac, Android and iOS.

Remote Desktop Manager Enterprise edition

Remote Desktop Manager Enterprise edition allows the use of the SQL Server data source, provided that the SQL Server is accessible via network connection. RDM accesses the database directly using a client/server architecture, and offers a variety of helpful features, including: multi-user support, document attachment storage, offline mode, connection logs, and user access management. Client licenses are required for each user, and multiple purchasing options are available, including: Single license (standalone or multiple users), Site license (unlimited users, single site) and Global license (unlimited users, multiple sites). Also, while Active Directory groups are not supported, Active Directory integration is supported with SQL Server authentication (each user must be manually added into the SQL Server). **The Enterprise edition is the most affordable and easiest solution to manage remote connections and passwords.**

Password Management Platform for an Entire Organization

Password Vault Manager (PVM) is a product used to manage passwords and sensitive information. It is used not only to store passwords, but also data such as credit card numbers, bank accounts, serial numbers, alarm codes, and much more, in an organized and secure database.

PVM can be securely shared throughout an entire organization so only users who have the appropriate security rights can access the information. Each user requires a license, with multiple purchasing options available, including: Single license (standalone or multiple users), Site license (unlimited users, single site) and Global license (unlimited users, multiple sites).

Password Vault Manager is currently available in two editions: **Free** and **Enterprise**. The Free Edition is designed for standalone users, while the Enterprise edition is designed for teams.

Both Free and Enterprise editions are available on PC, Mac, Android and iOS.

Devolutions Cloud

One Stop Access to Devolutions Online Services

Devolutions Cloud is the central location for all of Devolutions Online services**.** It is comprised of multiple services as summarized below.

The commonality between all of these services is that they require a free account to the Devolutions Cloud in order to access them.

Devolutions Customer Portal

The Customer Portal is a One-Stop shop for anything related to Devolutions, such as client licenses, invoices, support interface, forum access, etc.

Devolutions Online Database

The Online Database is a powerful, secure and low-cost cloud-based data source used to store remote connections, passwords and documents.

User data is stored in Devolutions' hosted cloud database, and encrypted with a private key, or a combination of private keys and passphrases. The Online Database enables access to sessions as well as connection logs and attachments. Plus, it offers unlimited user connections and security groups.

Three different subscriptions are currently available: Basic, Professional and Enterprise.

Devolutions Online Drive

The Online Drive stores and synchronizes remote connections and credentials online. Users can access their sessions from anywhere via an Internet connection.

It is an online file storage service dedicated to a single file type, Remote Desktop Manager's connection list. Online Drive is completely free and has no limitations as to how many sessions a user might have. It is for single users, as remote connections cannot be shared using the Online Drive.

Devolutions Online Backup

The Online Backup is our backup service for some of the data sources supported by our client applications. It is completely free and fully integrated as a feature in Remote Desktop Manager.

Devolutions Custom Installer

The Custom Installer allows users to create their own personalized installers for Remote Desktop Manager Enterprise or Password Vault Manager Enterprise. It replicates the settings from the Remote Desktop Manager instance used to create the package, and stores them in the package for distribution.

Devolutions Server

High-End Repository Focused on Team Functionality

Devolutions Server

Devolutions Server (DVLS) is a self-hosted repository for storing and sharing remote connections, credentials and sensitive information. Used in combination with a compatible Client application, it extends the capabilities to create an Enterprise wide high-end data store. It is ideal for clients who would prefer to store their data in-house, want to deploy their own SSL certificate or firewall, integrate Two-Factor Authentication or need Active Directory integration with role management.

Much like the Online Database, the RDM client connects to a DVLS data source, but it is hosted and controlled by the client. With it, clients have total control over security, configuration and network topology. It also offers a very smooth transition from the SQL Server data source to a DVLS data source. With a subscription plan (Small Business, Corporate and Platinium), clients enjoy all the features of the SQL Server date source, plus client and server side caching and Active Directory group management capabilities.

- **High-end security server for your organization**
- **Share your sessions with multiple users**
- **Can be deployed online or internally**
- **Support Windows authentication and Active Directory group management**
- **Client and server side caching optimization**
- **Integrates Two-Factor Authentication**
